

- Florida Largemouth
- Spotted
- Redeye
- Guadalupe
- Shoal
- Northern Largemouth and Smallmouth
- Suwannee

**BLACK BASS DISTRIBUTION**

It is impossible to perfectly distinguish the distribution of bass throughout the United States because of hybridization and stocking programs. Some states have introduced Florida strain largemouth well north of Interstate 20, and they have thrived. There are plenty of pure Northern strain and small-mouth bass south of this mark, as well. This map represents all the likelihood of a bass species being pure strain throughout the country. In order to be perfectly certain about the bass you are catching, check with your state's fish and wildlife management agency for local species availability.
